

FRX300

TECHNICAL DATA · DATI TECNICI

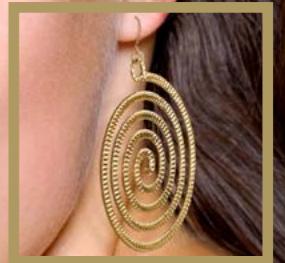

Area di lavoro · Working area	Axes · Asse X: 300 mm Axes · Asse Y: 350 mm Axes · Asse Z: 200 mm
Axis speed · Velocità asse	X-Y-Z: 20.000 mm/min
Axis precision · Precisione asse	X-Y-Z: +/- 0,01 mm
Axis resolution · Risoluzione asse	X-Y-Z: 2 micron
Pressurized electrospindle · Elettromandrino pressurizzato	60.000 rpm · giri/min
Changing tool · Cambio utensile	automatic
Mains supply · Alimentazione	230V 1ph 50-60 Hz
Dimensions · Dimensioni	850* x 1420 x 2003 mm
Net weight · Peso netto	600 Kg

*console excluded / esclusa

FRX300

creativity without boundaries

Always at the forefront of technology and focused on the needs of its customers, SISMA introduces three versions of the FRX 300 jewellery milling machine, one of the leading models of SISMA's product line. FRX 300 is an advanced-technology machine with 3rd, 4th and 5th axis, perfect for cutting and executing diamond cut operations with the utmost precision. This is the ideal machine for users looking for a high-tech solution, equipped with a noteworthy dedicated software. FRX 300 is also versatile thanks to the optional accessories and designed with a view towards scrap recovery.

creatività
senza
confini

FRX300 basic FRX300 professional FRX300 master

Three versions of the FRX 300 milling machine are available, characterized by their different equipment setup.

FRX 300 Basic for fixed plate machining in 2D and, as an optional, in 3D.

FRX 300 Professional set up for fixed or continuous plate machining, on both sides if needed, in 2D and in 3D (the last one as an optional).

FRX 300 Master top of the line, includes all optionals available on the other two models and is also set up for 4th and 5th axis.

Le versioni della fresa FRX 300 sono 3 e si distinguono per le diverse dotazioni.

FRX 300 Basic per la lavorazione della lastra fissa in 2D e, in opzione, in 3D.

FRX 300 Professional predisposta per la lavorazione della lastra fissa o in continuo, anche in entrambi i lati, in 2D e, in opzione, in 3D.

FRX 300 Master top della gamma, per la quale sono previsti tutti gli optional disponibili negli altri due modelli, è anche predisposta per il 4^o e 5^o asse.

Tool storage with pre-setting.

Tool storage with completely shielded pre-setting feeler and six tools.

Diamond cutting tools.

Three different tools for diamond cutting with "Idro" diamond tools, fan and pneumatic hammer.

Utensili per diamantare.

Tre diversi utensili per diamantare con diamanti "Idro", ventola e martellatore pneumatico.

Continuous 0-180° tilting plate haul-off.

Automatic plate feeding with integrated vacuum surface, 180° plate rotation and plate support reel.

Traino lastra in continuo basculante 0-180°.

Avanzatore automatico della lastra con piano a vuoto, rotazione lastra di 180° e bobina porta lastra integrati

Static clamp with vacuum surface.

Pneumatic clamps for machining plates with max. length of 250 mm, having variable centre-to-centre distances and complete with opening-closing valves and a depressurized surface.

Morsa statica con piano a vuoto.

Morse pneumatiche per lavorare lastre lunghe max. 250 mm ad interasse variabile complete di valvole di apertura-chiusura e di un piano depressurizzato.

4th and 5th axis.

Equipment for machining processes which require continuous movement of the 4th and 5th axis.

4° e 5° asse.

Attrezzatura per lavorazioni che richiedono la movimentazione del 4^o e 5^o asse in continuo.
