Acido stripper for e-coating 10 kg

Supplementary information

HOW TO USE

3009010 is a ready to use acidic paint stripper by simple dipping the items in stainless steel or polyethylene tanks. Pieces have to stay inside the acidic stripper only for the minimum time necessary to remove the e-coatings or paints. As this product is rather dense, it could be helpful adding in the stripper tank an amount of water which, floating on the layer stripper, will act as a sort of plug protecting against the excessive development of odours and unpleasant and irritating vapours.
